**HEAL Utah**  
Healthy Environment Alliance of Utah

68 S. Main St, Suite 400 Salt Lake City, Utah 84101 (801) 355-5055

February 2nd, 2010

Dear Members of the Utah State Radiation Control Board and Division of Radiation Control Director, Dane Finerfrock-

Since November 6<sup>th</sup> 2009, 394 citizens have signed our online petition in support of additional regulations surrounding the disposal of depleted uranium. Please consider these as submissions as public comments for proposed changes to R313-25-8. The text of the petition and the names and addresses of the signers is included. If you need additional verification of the authenticity of the signatures, HEAL Utah can provide that.

Numerous citizens added their names to the petition in support of license condition 35, version 2. Please also consider these in regards to R313-25-8, as the signers' intentions are obvious.

A handful of citizens elected to interject their own personal comments as well, and those are singled out from the stack.

For communication purposes, you may consider all signers to have designated HEAL Utah as their representative in this matter, and please do not feel obligated to respond to these comments on an individual basis.

I would also draw your attention to a *Salt Lake Tribune* article dated February 2<sup>nd</sup> 2010 titled "Radioactive Waste Not Welcome Here: Poll: Overwhelming majority says Utah is not the right place for depleted uranium and foreign nuclear material." The poll referenced indicated 76% of Utahns are opposed to the disposal of depleted uranium in Utah.

Thank you in advance for your thoughtful consideration of the wishes and desires of Utahns, the vast majority of whom would prefer to see increased regulation of depleted uranium disposal.

Sincerely-

Eric Spreng  
Community Outreach Director  
HEAL Utah

Division of Radiation Control  
Room 212, Airport East Business Building (Bldg #2)  
168 North 1950 West  
Salt Lake City, Utah

*Hand delivered*

Dear Utah Radiation Control Board members,

I am pleased to submit these comments regarding proposed changes to R313-25-8 dealing with the land disposal of depleted uranium.

Within the next month or so, around 10,000 drums of depleted uranium from spent fuel reprocessing will be loaded onto trains in South Carolina and shipped to Utah for disposal. The proposed rule regarding land disposal of depleted uranium would ensure that such disposal is only allowed after a performance assessment is conducted and approved by Utah's Executive Secretary for Radiation Control that covers a minimum of 10,000 years and a "qualitative analysis" out to the time of peak dose.

Because the threat of additional large quantities of depleted uranium is imminent, I urge you to act with all haste to adopt the proposed rule as written. As is often said, we should not let perfection become the enemy of the good, and in this case, we believe the public interest is best served by swift adoption of the additional protections afforded by the proposed rule change.

However, we also believe that the rule does not sufficiently spell out how the performance assessment should be conducted, what role the public should have in the process, and what constitutes the threshold of success or failure within the context of the performance assessment.

In the world of performance assessments, the outcome is entirely dependent upon the starting assumptions and the "rules of the game" as determined by the software programmer.<sup>1</sup>

---

<sup>1</sup> For example, see NRC's CLI-06-15, online at <http://www.nrc.gov/reading-rm/doc-collections/commission/orders/2006/2006-15cli.pdf>: "At one point, Envirocare's license contained a concentration limit on uranium isotopes, but the current license allows disposal of depleted uranium with no volume restrictions. The original radionuclide concentration limit was based upon a site-specific performance assessment that assumed potential intruder exposures. . . . Utah granted Envirocare a license amendment eliminating the uranium concentration limits after concluding that the intruder scenarios assumed in the Baird Report were unrealistic and therefore unnecessarily conservative" [underline added].

With this in mind, NEAL Utah recommends that the Board issue a brief policy statement by the end of calendar year 2010 setting forth how the Board intends for the performance assessment to be conducted. Please consider the following suggestions for inclusion in the policy statement:

#### *How the Performance Assessment Should be Conducted*

- The performance assessment should model future exposures to a hypothetical on-site intruder, similar to on-site intruder scenarios that form the basis of the low-level waste classification scheme found in 10 CFR Part 61. Although the specifics of a scenario might be different in different locations, at a minimum, the intruder must be modeled to come into direct contact with the waste, in conformance to Utah rule **R313-25-20. Protection of Individuals from Inadvertent Intrusion**, which requires “protection of any individuals inadvertently intruding into the disposal site and occupying the site or contacting the waste after active institutional controls over the disposal site are removed.” Such a scenario represents a conservative and protective approach and also acknowledges the considerable uncertainty surrounding how the climate at a given site may change in the future, and how potential use of the site may change as a result.
- The performance assessment must take into account large changes in climate that can occur over a one million-year period. Accordingly, the geologic record should be used as a reference point for modeling future climatic and geologic conditions.
- The performance assessment should calculate doses to critical organs as well as whole body dose equivalents. Utah rule **R313-25-19. Protection of the General Population from Releases of Radioactivity** requires this, stating: “Concentrations of radioactive material which may be released to the general environment in ground water, surface water, air, soil, plants or animals shall not result in an annual dose exceeding an equivalent of 0.25 mSv (0.025 rem) to the whole body, 0.75 mSv (0.075 rem) to the thyroid, and 0.25 mSv (0.025 rem) to any other organ of any member of the public.”

#### *A Role for the Public*

- The details of the performance assessment should be presented in a public forum, with the opportunity for a question-and-answer session. The company contracted by the state of Utah to review the performance assessment should conduct a public workshop explaining how the model works, what assumptions were used, which exposure scenarios were included, and what the results mean.
- Public input should be solicited by way of public notice and comment prior to Executive Secretary approval or denial of the performance assessment.
- The Executive Secretary’s decision on whether or not to allow depleted uranium for disposal should be publicly noticed and will be appealable to the Radiation Control Board.
- Contingent upon funding, a multi-disciplinary peer review panel should be convened to review and render a report on the efficacy and robustness of the

performance assessment. The panel should include experts in the following areas:

- Geochemistry, with specific knowledge of Uranium mineralogy and geochemistry
  - Hydrology, with knowledge of near-surface and porous media flow
  - Climate change, with specific knowledge of the geological past of a specific location
  - Gaseous diffusion, with specific expertise on radon gas
  - Health physics, with knowledge of the risk of radiation exposure to humans
  - Mining
  - Biology and ecology, with specific knowledge of how Uranium can affect plants, wildlife, and ecosystems
- The peer review panel should conduct public meetings, accept public input during the review, and make its final report publicly available. The Executive Secretary should take the final report into account before making a decision on whether or not to accept the results of the performance assessment.
  - Local, State, and Federal elected officials from Utah should seek to fund such a peer review panel, as the issues are highly complex and the Nuclear Regulatory Commission (NRC) is similarly contemplating changes to its own regulations on depleted uranium, including potential requirements for performance assessments.

#### *Threshold for Success or Failure*

- If probabilistic analytical software (like GoldSim™) is used to conduct the performance assessment, then a high percentage of the simulations—over 95%—must meet the applicable dose limits in order for disposal of significant quantities of depleted uranium to be deemed acceptable. Otherwise, the highest-dose scenario should be determinative.
- Any “disruptive event” that could reasonably lead to catastrophic failure of a disposal facility up to and including the “period where peak dose occurs” should be deemed unacceptable for depleted uranium disposal. Such a requirement is in keeping with Utah rule **R313-25-23. Disposal Site Suitability Requirements for Land Disposal - Near-Surface Disposal**, which states: “Areas shall be avoided where surface geologic processes such as mass wasting, erosion, slumping, landsliding, or weathering occur with sufficient such frequency and extent to significantly affect the ability of the disposal site to meet the performance objectives of R313-25, or may preclude defensible modeling and prediction of long-term impacts.”

Depleted uranium is a matter of vital public interest. Submitted with this document please find 394 comments submitted through HEAL Utah’s website. For your convenience, the comments are grouped and tabulated onto spreadsheets, with the exception of five comments that were unique. Please send any correspondence on these comments to HEAL Utah rather than to the individuals listed.

Please also note that a recent poll indicates that registered Utah voters of all political stripes oppose depleted uranium disposal in the state, by a margin of 76% opposed to 16% that support, with 8% undecided. A news article detailing the poll is included with this submission for your convenience.

Furthermore, we continue to believe that a disposal depth of 10 feet for depleted uranium is insufficient to protect Utah public health and the environment and we incorporate by reference HEAL Utah's comments submitted on proposed license condition 35 to EnergySolutions' radioactive materials license, submitted December 23, 2009. We also believe existing performance assessments for the EnergySolutions' facility are not adequate to capture the hazard of depleted uranium and incorporate by reference HEAL Utah's comments on EnergySolutions' radioactive materials license renewal, submitted September 21, 2007. We also incorporate by reference technical comments submitted on the proposed changes to Utah rule R313-25-8 by Doctors Nelson, Oviatt, and Rupper.

In conclusion, because of the overwhelming public concern about depleted uranium in the state and the inadequacy of current assessments and approaches to the issue, we strongly urge you to adopt proposed changes to Utah rule R313-25-8 requiring a performance assessment. We also urge that the Board issue a policy statement that sets forth Board expectations for how that performance assessment will be conducted, including relevant assumptions and scenarios, a significantly enhanced public participation component, and thresholds of acceptability of the performance assessment.

Please feel free to contact me if you have any questions or concerns.

Sincerely,

A handwritten signature in black ink, appearing to read "Christopher Thomas", with a long horizontal line extending to the right.

## Poll: Radioactive waste not welcome here

Overwhelming majority says Utah is not the right place for depleted uranium and foreign radioactive waste

By Judy Fahys  
The Salt Lake Tribune

Salt Lake Tribune

Updated:

# The Salt Lake Tribune

<http://www.sltrib.com>

Utahns strongly support a federal ban on importing radioactive waste from foreign nations.

And, even more strongly, they oppose the disposal of thousands of tons of depleted uranium in their state.

Whether they were Republicans or Democrats, men or women, members of the LDS church or not - the majority of registered voters who responded to a recent poll conducted for *The Salt Lake Tribune* objected to low-level radioactive waste coming to the state.

The question made Grantsville resident Anne Watson recall the story of scientist Marie Curie, who died from exposure to the radioactive material she studied.

"That's my concern," said Watson, the mother of four, grandmother of 12 and soon-to-be great-grandmother of seven. "Is there going to be a day when we're going to be exposed to it? I don't know how secure it will be" for future generations.

Radioactive waste remains a hot-button issue for Utahns even though a specialized landfill in Tooele County has been in operation for 20 years and has for years been the nation's busiest burial ground for low-level waste.

Providing disposal primarily for waste from government cleanups and nuclear reactors, the site now operated by Salt Lake City-based EnergySolutions Inc. has been the subject of an aggressive public relations campaign.

Company president Val Christensen said depleted uranium "becomes a non-issue" when Utahns understand the science behind it.

"We need to do a better job explaining the science behind the material we manage," he said.

"Our managing of DU poses no health or safety concern to the environment or citizens of Utah, now and in the future," he said. "We have safely managed Class A waste for nearly 20 years without a single health or safety issue."

Washington, D.C.-based Mason-Dixon Polling and Research surveyed 625 registered voters in Utah between Jan. 18 and Jan. 20.

Brad Coker, managing director for the firm, has previously conducted polls for newspapers in Nevada, where a government-owned low-level waste site is located and a national repository for underground disposal of high-level nuclear waste has been proposed for two decades.

Speaking of the recent Utah poll, he said: "There was nothing surprising in those results."

Scott Sharp, a contractor who lives in the canyons outside Salt Lake City, has no objections to depleted uranium or foreign waste as long as it can't seep into the water.

"It just doesn't bother me," he said. "It's just a godforsaken desert, and [the waste] has got to go somewhere."

Sterling Beck, an unemployed engineer from Genola, agreed there is no cause for concern about either radioactive waste proposal. He sees the controversy as little more than political fodder.

"No," he said, "I don't have strong feelings about this."

Congressmen Jim Matheson, D-Utah, and Jason Chaffetz, R-Utah, are cosponsors of legislation to ban most imports of radioactive waste. The House passed the bill two months ago, but companion legislation is being delayed in the Senate, in part because U.S. Sen. Bob Bennett, R-Utah, opposes it.

Utah Gov. Gary Herbert, a Republican, also supports the legislation and has gone to court to help another effort to block EnergySolutions from burying more foreign waste in the Utah disposal site. Herbert also has expressed concern about 11,000 tons of depleted uranium being added to the 49,000 already at the EnergySolutions site.

For Mary Thomson of Bountiful, a distrust of EnergySolutions drives her opposition to depleted uranium and foreign waste.

"We didn't make it," said the mother of a school-aged child. "We're not getting any benefit. I don't think the leaders [in Utah] are listening to the public, but they are listening to lobbyists."

## Poll: Utahns do not want uranium waste

Do you support or oppose proposed federal legislation that would ban radioactive waste imports from foreign countries?

Thousands of tons of depleted uranium are planned to be shipped to Utah for burial. Do you support or oppose disposal of this waste in the state?

Poll of 625 registered Utah voters interviewed Jan. 18-20 by Mason-Dixon Polling & Research Inc. of Washington, D.C. Margin of error:  $\pm 4$  percentage points. © 2010 The Salt Lake Tribune

Dear Members of the Utah State Radiation Control Board, and Division of Radiation Control Director, Dane Finerfrock,

As you are aware, the radioactivity of depleted uranium continues to grow over thousands of years, eventually surpassing levels of B and C waste streams currently banned in the state of Utah. The current rules surrounding the disposal of depleted uranium have been acknowledged by the Nuclear Regulatory Commission as inadequate, and depleted uranium may not be found suitable for near surface disposal after completion of the ongoing rule making process.

Whereas shipments of concentrated depleted uranium oxide from the Savannah River Site to Clive, Utah are imminent, your duty as public stewards serving to protect our state from radiological hazards compels your direct action in defense of the public health and environment.

As a citizen of Utah, I insist that you act to amend the license of EnergySolutions to ensure that no depleted uranium comes to our state in advance of the completion of public health studies, site specific analysis, and performance assessments, which fully take into account levels of peak dosage and geomorphologic impacts of erosion on the Clive facility.

The mission of your agency is to protect Utah citizens and the environment from sources of radiation that constitute a significant health hazard. Please act in accordance with your mission, and do not waver in the face of legal intimidation or obfuscation of the facts. On December 8th, vote in favor of license amendments preventing depleted uranium from being disposed of under Utah soil in advance of all proper studies and safeguards.

Thank you,

Dear Members of the Utah State Radiation Control Board, and Executive Secretary, Dane  
Finerfrock,

As you are aware, the radioactivity of depleted uranium continues to grow over thousands of years, eventually surpassing levels of B and C waste streams currently banned in the state of Utah. The current rules surrounding the disposal of depleted uranium have been acknowledged by the Nuclear Regulatory Commission as inadequate, and depleted uranium may not be found suitable for near surface disposal after completion of the ongoing rule making process.

Whereas shipments of concentrated depleted uranium oxide from the Savannah River Site to Clive, Utah are imminent, your duty as public stewards serving to protect our state from radiological hazards compels your direct action in defense of the public health and environment.

As a citizen of Utah, I stand behind and support your course of action to devise new rules to ensure that no depleted uranium comes to our state in advance of the completion of public health studies, site specific analysis, and performance assessments. I also urge you to include provisions which fully take into account levels of peak dosage and geomorphologic impacts of erosion on the Clive facility.

The mission of your agency is to protect Utah citizens and the environment from sources of radiation that constitute a significant health hazard. This no doubt applies to both present and future generations. Please act in accordance with your mission, and do not waver in the face of legal intimidation or obfuscation of the facts. I urge you to vote in favor of a new rule preventing depleted uranium from being disposed of under Utah soil in advance of all proper studies and safeguards.

Thank you,

01/20/2010 - Gretchen Jarvis

Dear Members of the Utah State Radiation Control Board, and Executive Secretary, Dane Finerfrock,

As you are aware, the radioactivity of depleted uranium continues to grow over thousands of years, eventually surpassing levels of B and C waste streams currently banned in the state of Utah. The current rules surrounding the disposal of depleted uranium have been acknowledged by the Nuclear Regulatory Commission as inadequate, and depleted uranium may not be found suitable for near surface disposal after completion of the ongoing rule making process.

Whereas shipments of concentrated depleted uranium oxide from the Savannah River Site to Clive, Utah are imminent, your duty as public stewards serving to protect our state from radiological hazards compels your direct action in defense of the public health and environment.

As a citizen of Utah, I stand behind and support your recent decision to act to amend the license of Energy Solutions to ensure that no depleted uranium comes to our state in advance of the completion of public health studies, site specific analysis, and performance assessments. I also urge you to include provisions which fully take into account levels of peak dosage and geomorphologic impacts of erosion on the Clive facility.

The mission of your agency is to protect Utah citizens and the environment from sources of radiation that constitute a significant health hazard. This no doubt applies to both present and future generations. Please act in accordance with your mission, and do not waver in the face of legal intimidation or obfuscation of the facts. On December 8th, I urge you to vote in favor of license amendments preventing depleted uranium from being disposed of under Utah soil in advance of all proper studies and safeguards.

It is a fact that the UTTR (Utah Test & Training Range) lays right next door to the Energy Solutions nuclear waste storage area (40 degrees 41.386 mins north, 113 degrees 6.778 mins west) two and half miles south of I-80 at Clive Exit 49. The UTTR lies on both sides of Interstate 80 with the nuclear storage site in the middle of both the North and South Test Ranges. Military aircraft with live munitions are continually flying between the North and South Test Ranges. This nuclear waste may be low level but if it were thrown into the air by an unintended live ordnance drop or aircraft accident it would be a national disaster.

By using Google Earth you can see bomb craters caused by bombs that were inadvertently released north (off range) of the UTTR's south range just south of the Energy Solutions low-level nuclear site (4 miles). In addition there is a live munitions target area 17 miles to the southwest (40 degrees 30.991 mins north, 113 degrees 20.087 mins west) of the purposed site. I don't know about you but this makes me extremely nervous with live ordnance flying over a nuclear waste facility.

It appears to me that we are setting ourselves up for the perfect Murphy's Law incident. When it does happen our government and corporate leaders will come back and say "Sorry no one could have anticipated this occurring".

Thank you for your attention,

Gary  
Potter

11/06/2009 - 12:57pm

Dear Members of the Utah State Radiation Control Board, and Executive Secretary, Dane  
Finerfrock,

Thank you for your recent decision to await completed public health studies, site specific  
analysis, and performance assessments before more depleted uranium is brought to Utah.

This decision is in line with DRC's mission to protect Utah from sources of radiation that  
constitute a significant health hazard.

Peace,

Kathy Van Dame  
1148 E 6600 S

11/06/2009 - 1:04pm from [REDACTED]

Dear Members of the Utah State Radiation Control Board, and Executive Secretary, Dane  
Finerfrock,

I am very opposed to allowing depleted uranium to be brought into Utah and stored here. Those who generate this waste should take responsibility for its disposal; instead of addressing this issue where the waste was generated in the first place, citizens of Utah have to live with the garbage someone else created. This is completely unfair to citizens of this state. Depleted uranium can endanger the health of our families, our wildlife, and the natural environment Utah is so famous for. Turning away the money that is being offered in exchange for bringing this waste here is difficult, but allowing uranium to be dumped in this state means that we're selling our future. This state and its people are too valuable.

Thank you,

Silence Maestas  
587 Heritage Center  
Salt Lake City Utah 84112

11/06/2009 - 12:43pm from

Dear Members of the Utah State Radiation Control Board, and Executive Secretary, Dane  
Finerfrock,

As a former citizen of Utah now living in Iowa, I stand behind and support your recent decision to act to amend the license of EnergySolutions to ensure that no depleted uranium comes to our state in advance of the completion of public health studies, site specific analysis, and performance assessments. I also urge you to include provisions which fully take into account levels of peak dosage and geomorphologic impacts of erosion on the Clive facility.

Thank you,

Adam Shaffer
